YOU.

Tetra built devices range in complexity: from simple adaptations of existing products to one-of-a-kind inventions

# Re-Imagine What is Possible

**Tetra Society of  
North America**  
helps people with disabilities  
through the creation of  
volunteer-built, custom  
assistive devices to overcome  
physical barriers

From Vancouver to Halifax, Tetra volunteers are in communities across Canada and the engineers, woodworkers, teachers, and craftspeople who volunteer with us all share a common desire to help others. Tetra volunteers create "gizmos" that address individuals' specific needs, without focusing on income level.

*"I call it my everything because I use it for everything, for my specific needs: to make my day easier, more functional, less exhausting." – Patty*

*"I have a bike that I can take around the seawall and just go for a leisurely ride with my friends...and, when we stop at a pub on the seawall, I can just take it apart and then I've got my chair right there!" – Victoria*

Tetra assistive devices support people with disabilities in all aspects of their lives:

- home - school - play
- personal care - eating - sport - recreation - employment
- communication
